

Data Audit Summary

Dataset Overview

- Total Rows: 101,766
 - Total Columns: 50
 - Dataset: Diabetes Readmission Dataset
-

Missing Value Assessment

The following fields contained missing or placeholder values:

Column	Missing/Placeholder Values
race	2,273 (?)
payer_code	40,256 (?)
medical_specialty	49,949 (?)
gender	3 (Unknown/Invalid)

Duplicate Check

- Duplicate records identified: 0
 - No duplicate patient encounters were found.
-

Data Quality Issues

Several categorical fields contained:

- Placeholder values ("?")
- Inconsistent formatting
- Special characters
- Mixed categorical standards

These fields were reviewed during cleaning.

Data Type Assessment

All variables were initially imported as text and reviewed prior to analysis.

Data types were assigned based on variable meaning:

- Categorical variables → VARCHAR
 - Numerical variables → INTEGER
-

Data Cleaning Actions

The following activities were performed:

- Removed unnecessary variables
 - Standardized data types
 - Reviewed categorical values
 - Prepared analysis-ready dataset
 - Created SQL views for dashboard reporting
-

Outcome

A cleaned dataset was created and used for exploratory analysis, business insight generation, and Power BI dashboard development.
